

Why Cyber724?

As business leaders, we no longer have the luxury of waiting to address cyber threats. Canadian industry sits at the forefront of innovation and digital business, and this position is exposed to a wide array of advanced malicious actors.

Over **70% of Canadian businesses** have been victims of cyber attacks as of 2016. Over 80% of directors routinely discuss cybersecurity in the boardroom, yet **66% of directors lack confidence in their companies' cybersecurity program**, exposing organizations to inappropriately managed risk.

Our Managed Security Services solution, called 'Cyber724' is confronting this challenge. The aim of Cyber724 is to keep our clients' networks safe, to keep teams in the field connected and to allow our clients to move data and conduct their business without fear of cyber exploitation.

Cyber724's solutions includes: responding to daily alerts as warranted by our security professionals; conducting internal and external vulnerability scans; conducting monthly full security review and preparation of quarterly security reports.

After the Cyber Security environment has been configured, the analytics and data produced by our Cyber Security appliance will be monitored by our SOC. The SOC is staffed by IT security professionals whose goal is to detect, analyze and respond to cybersecurity incidents using a combination of technology solutions and established processes.

We monitor and analyze activity on networks, servers, endpoints, databases, applications, websites, and other systems, looking for anomalous activity that could be indicative of a security incident or compromise.

CyberWatch is our response to the market's demand for answers to an unrelenting threat. The solutions we bring to bear are intended to help our clients understand the risks they are facing, to grasp how to manage and respond to threats, and to know what steps they should take to mitigate risk.

We look forward to helping you achieve greater peace of mind around your business' information security.
